Project Statement

The project aims to develop a user-friendly web application that facilitates the booking of outpatient appointments with doctors, streamlining the process for both patients and healthcare providers.

Abstract

This project aims to develop a user-friendly web application to streamline outpatient appointment booking for patients and healthcare providers. The platform will simplify scheduling, provide real-time availability updates, and ensure seamless appointment management. By reducing wait times and optimizing workflows, the application enhances convenience and efficiency. Patients can easily access healthcare services, while providers benefit from improved resource utilization. This solution promotes a more accessible and efficient healthcare experience for all users.

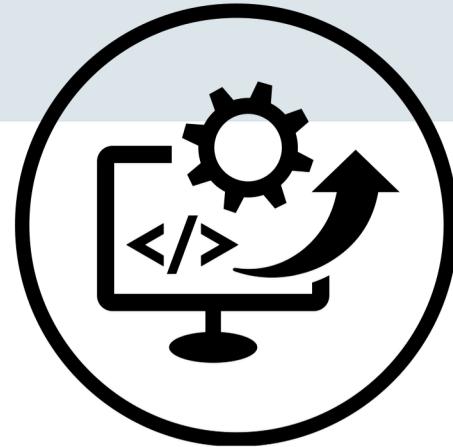

Introduction

The E-Doctor Application is a web-based platform designed to revolutionize the process of booking outpatient appointments. By connecting patients and doctors through a seamless interface, the application eliminates inefficiencies in traditional scheduling methods. It offers features such as user authentication, real-time appointment booking, doctor availability management, and automated notifications. This project aims to improve the experience of healthcare delivery by simplifying appointment management for both patients and doctors, ensuring convenience, accessibility, and satisfaction for all stakeholders involved.

Requirements

Frontend: React.js

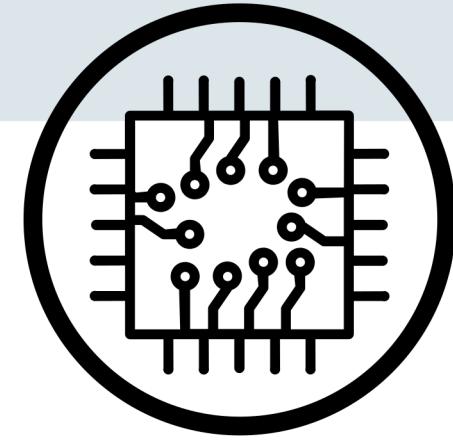

Backend: Spring Boot, Maven

Database: MySQL , PostgreSQL

Tools: IntelliJ IDEA/Eclipse, Visual Studio

Code, Postman.

OS: Windows 10/11, macOS, or Linux

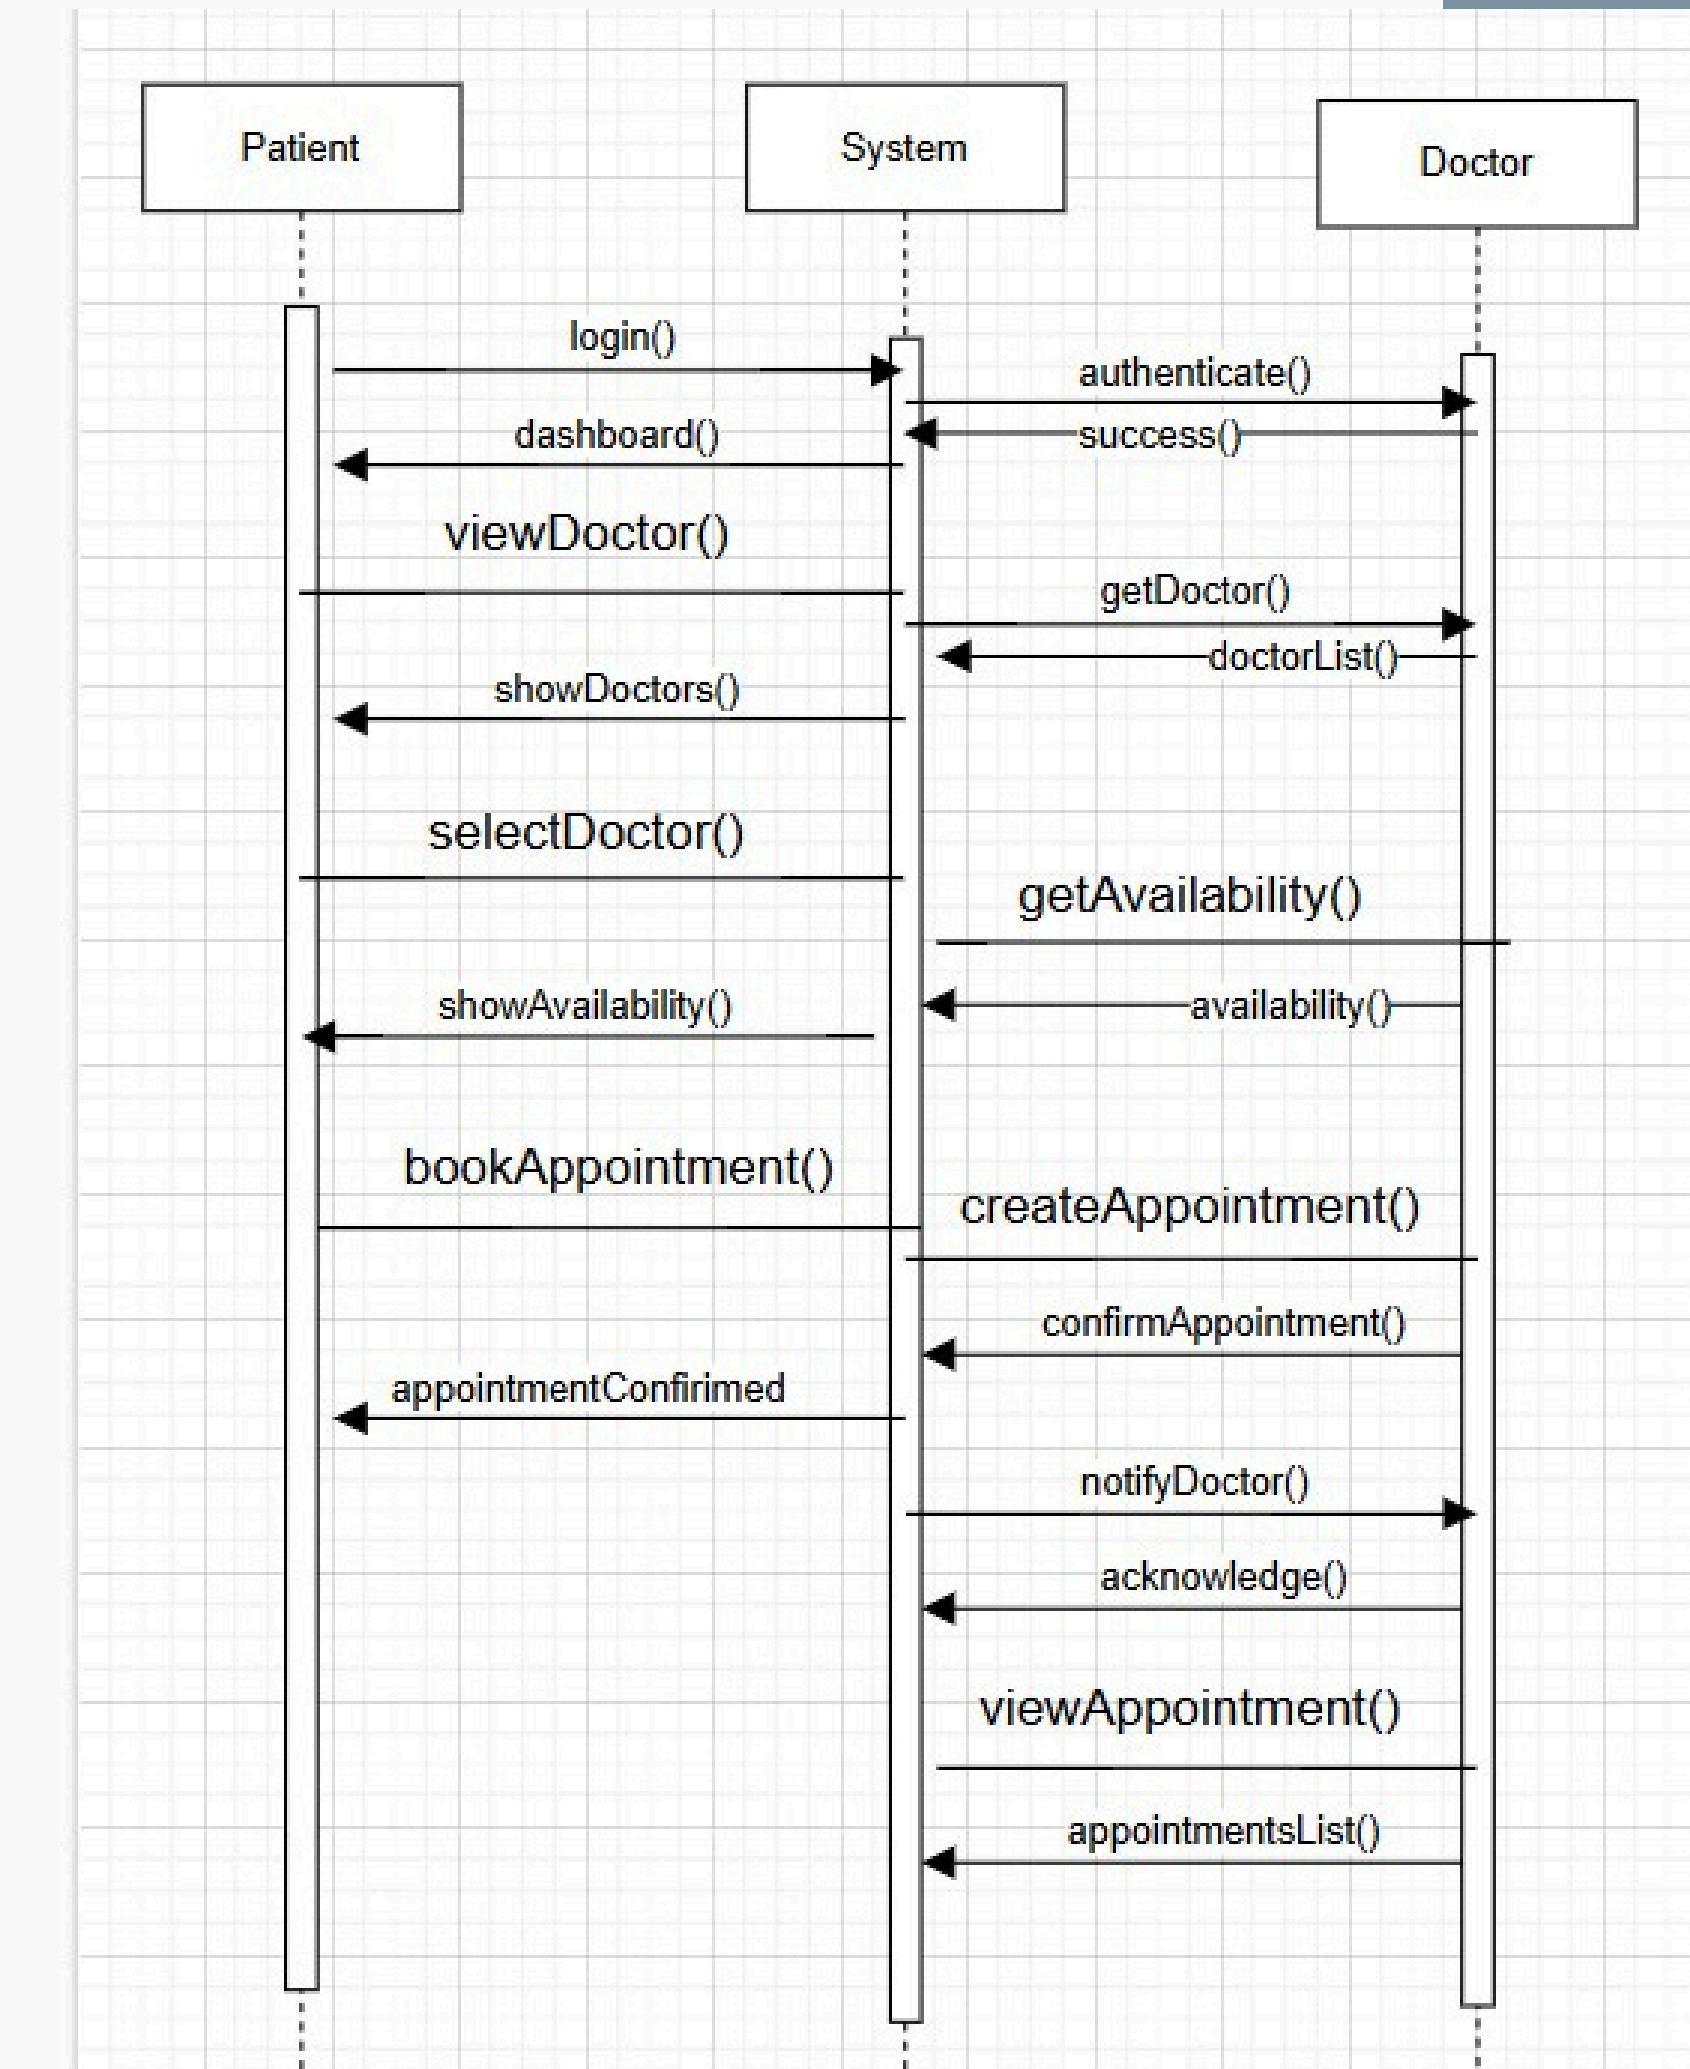

Processor: Intel i3+ / AMD equivalent

RAM: 8 GB (Recommended: 16 GB)

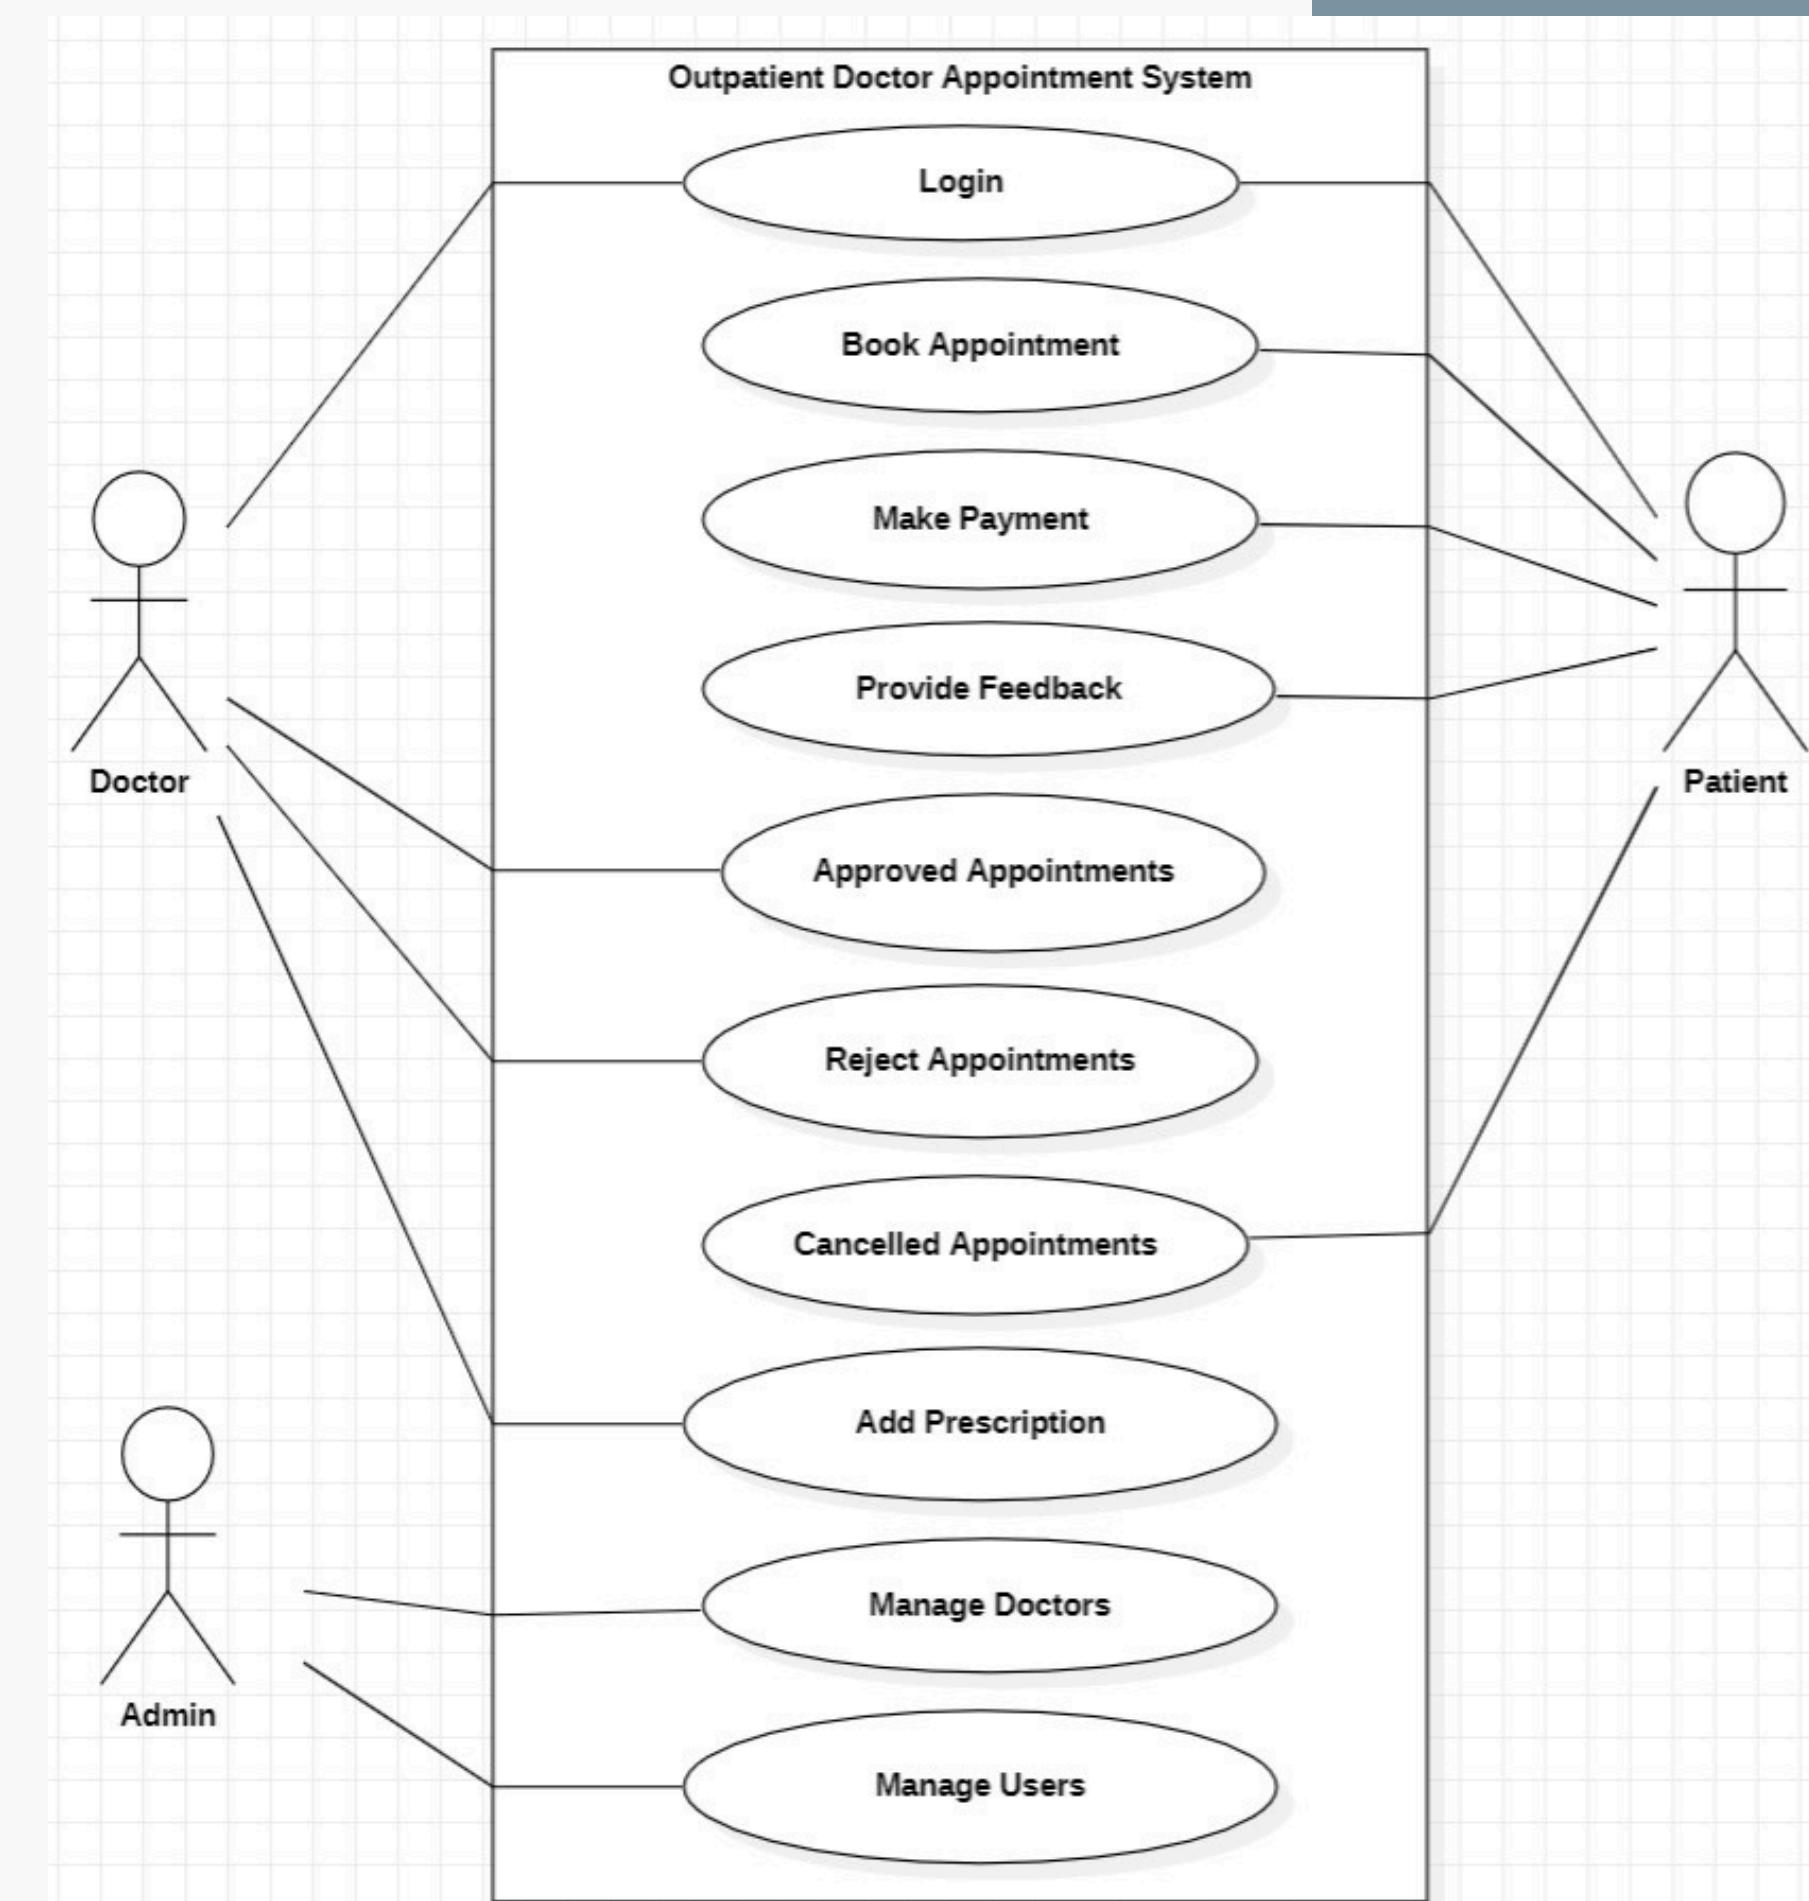

Storage: 256 GB SSD or 500 GB HDD
(Recommended: 512 GB SSD)

Internet: Stable connection

OUTPATIENT DOCTOR APPOINTMENT SYSTEM

A large dark blue arrow points from the left towards the center of the page, containing the main title "OUTPATIENT DOCTOR APPOINTMENT SYSTEM". To the right of the arrow is a light blue background area featuring a cartoon illustration of a doctor in a white coat and a face mask examining a patient who is seated in a chair. The doctor is also wearing a face mask and has a stethoscope around their neck. In the top right corner of the main content area, there is a small navigation bar with links for "Home", "Feedback List", "Login", and "Registration".

Users can give Feedback Once Appointment is Completed.

User-Profile Page

The image shows a user-profile page for a patient named "testpatient1@gmail.com". The top navigation bar includes "Home", the user's name, a notification bell icon with a red "3", and a "Logout" button. On the left sidebar, there is a profile picture placeholder for "Test Patient 1" and links for "Dashboard" (highlighted in green), "Edit Profile", "My Appointments", and "Doctors List". The main content area features three cards: "Pending Appointments" (2), "Completed Appointments" (1), and "Prescriptions" (1).

Conclusion

The **E-Doctor Application** demonstrates our ability to design and implement a comprehensive solution for streamlining outpatient appointment management. By integrating modern technologies like React, Spring Boot, and MySQL, we created a user-friendly platform catering to patients, doctors, and administrators.

This project not only enhanced our technical skills but also fostered teamwork, problem-solving, and innovation. We believe the application holds immense potential to improve efficiency in healthcare systems and deliver a seamless experience for all users.

Thank you
